

All-in-one PV/wind inverters control

**HYBRID COMPACT** is one controller of a complete range for energy sources and power plant management: generators, mains, PV/wind, batteries storage, tie breakers. It controls PV/wind inverters in applications paralleled with one or several generators and one or several batteries inverters. This type of power plant can operate on-grid or off-grid. HYBRID COMPACT offers flexibility and time saving thanks to its simple wiring and easy programming.

### Hardware display

The controller is available in both switchboard panel mounted version with display, or core base mounted version and compatible with i4Gen touchscreen color display range.

### Software

The controller is configurable from its front panel display, from i4Gen HMI, or through the free i4Gen Suite software.

CORE BASE DIN RAIL MOUNTED VERSION

SWITCHBOARD MOUNTED VERSION WITH DISPLAY

#### Part numbers:

**A56-PV-00** Switchboard mounted version with display **A56-PV-10** Core base mounted version

### **KEY FEATURES**

### Single line power plant overview

An interactive and adaptative single-line diagram is generated automatically from the configuration. It provides a global view of the power plant and the possibility to switch between controllers in one click.

### **Easy connection to controllers**

Automatic detection of controllers on the Ethernet network for fast and easy connection.

## Compatibility with generator and grid controllers

Compability with PRIME, BAT, MASTER 1B and BTB controllers of the COMPACT range to manage complete hybrid power plants.

## Ocompatibility with all inverters on the market

Modbus TCP or RTU (with adapter) communication with all inverters on the market:

- Plug and play connection with Sunspec inverters
- Compatibility with non Sunspec thanks to custom Modbus TCP mapping.

## Ocontrol of the PV/wind KVAR reactive

either by imposing a configurable fixed power factor, or by sharing the kVAR between the PV/wind energy and the other sources

### **PV/Wind power limitation**

So as to keep a minimum power on the generator(s)

### Immediate stop of the PV/wind production in case of reverse power on the generator(s)

So as to keep the installation energy supplied.

## Voltage and current measurement inputs For redundant acquisition of electrical measurements and

For redundant acquisition of electrical measurements and faster than communication with the inverter.

### Enchanced graphical display

Important information are displayed on easy-to-read graphical widgets: numerical values, bar graphs, gauges, curves, animated synchroscope....

### User friendly equations programming

Easily program your own equations using the drag & drop Easyflex feature.

### Remote access (optional)

- Supervise, configure and control your power plant from anywhere through a reliable and secured remote communication provided by Zoho Assist
- Receive E-mails from i4Gen when an event, an alarm or a fault is triggered.

### On-board modbus TCP client and server for integration with other devices

- Client (master): create custom frames in reception or transmission to read or write datas
- Server (slave): allow other devices to read/write the controller registers (with 300 registers available for custom mapping).

### Automatic versions update

Automatic update of controller firmware and PC software versions.

### **OTHER FEATURES**

### **Power control and management**

- Datas shared between the controllers through CANbus for optimised control of the power plant: load sharing, clock synchronization, generator start/stop, sharing of electrical measures
- Management of complex power plants with multiple generators, grids, BESS, PV/wind systems, tie breakers (up to 40 of them in one power plant).
- Allow to control a single PV/wind inverter, or several inverters through the proprietary inverter centralizing device.
- PV/Wind electrical protections.
- PV/Wind & Inverter temperatures (through PT100 analog input) display and protections.
- Manual control (CLOSE/OPEN) of the PV/Wind production relay.
- On loss of communication with the inverter, either:
  - Opening the PV/wind production relay
  - Switching the generators in droop mode to ensure operation despite the lack of communication between HYBRID COMPACT & the inverter. As soon as communication returns, the droop is disactivated to return to isochronous mode

- Two operating modes available:
  - ECO: possibility to stop all the generators and charge/discharge the batteries according to the sun
  - STORAGE: one generator, at least, always started and the batteries always fully charged

### **Displayed information**

- Alarms and events logging: Detailed history log with timestamps of the 500 last events, alarms and faults for easy and fast troubleshooting.
- Acquisition and display of the inverter's electrical measures.
- Inputs/Outputs status.

### **Programming**

- · Scheduler: Periodic or one-off execution of specific functions and modes can be scheduled.
- Alternative parameters values configurable and switchable using digital inputs or through modbus TCP.

All-in-one PV/wind inverters control

### **APPLICATION EXAMPLES**

### ON GRID PV/WIND APPLICATION

### PRODUCTS REQUIRED

- 1 HYBRID COMPACT
- 1 MASTER COMPACT 1B

### **OFFGRID RENEWABLE APPLICATION**

PRODUCTS REQUIRED

2 HYBRID COMPACT + 2 BAT COMPACT

#### **FFATURES**

**FEATURES** 

current

· Batteries as grid forming

PV/Wind limitation to

· Photovoltaic as grid forming

respect batteries charge

- · Mains kW export/import control
- · Mains kW cost reduction

#### ON GRID RENEWABLE APPLICATION

- PRODUCTS REQUIRED 1 HYBRID COMPACT + 1 BAT COMPACT
- 1 MASTER COMPACT 1B

### HYBRID APPLICATION WITH GENSETS, PV/WIND SYSTEMS AND BESS

### PRODUCTS REQUIRED

- 2 GENSYS COMPACT PRIME
- 1 MASTER COMPACT 1B
- 2 HYBRID COMPACT + 2 BAT COMPACT

### **FEATURES**

- · Mains kW export/import control
- · Mains kW cost reduction
- · Backup energy in case of mains failure

- Start/Stop control
- · Genset mechanical &
- electrical protections
- Breakers management
- Synchronization
- · Generator load sharing
- · Mains power management
- Load shedding
- Mains paralleling
- Communication ModBus & Spec
- Control PV/wind & battery inverter
- Control of the reactive power kVAR batteries & PV
